Takes engine-tuning techniques to the next level. It is a must-have  
for tuners and calibrators and a valuable resource for anyone who  
wants to make horsepower with a fuel-injected, electronically  
controlled engine.

Machining is an essential part of high-performance engine building and  
stock rebuilding, as well as certain servicing procedures. Although  
you may not own the expensive tooling and machining to perform all or  
any of the machining required for a quality build, you need to  
understand the principles, procedures, and goals for machining, so you  
can guide the machining process when outsourced. Classic and older  
engines typically require extensive machining and almost every major  
component of engine, including block, heads, intake, crankshaft, and  
pistons, require some sort of machining and fitment. A detailed,  
authoritative, and thorough automotive engine-machining guide for the  
hard-core enthusiast has not been available until now. Mike Mavrigian,  
editor of Engine Building Professional, walks you through each  
important machining procedure. A stock 300-hp engine build has far  
different requirements than a 1,000-hp drag race engine, and Mavrigian  
reveals the different machining procedures and plans according to  
application and engine design. The author also shows you how to  
inspect, measure, and evaluate components so you can provide astute  
guidance and make the best machine work choices. Machining procedures  
included are cylinder boring, align boring/honing, decking, valveseat  
cutting, cam tunnel boring, and a multitude of other services. In  
addition, multi-angle valve jobs, setting the valveseats, altering  
rocker arm ratio, re-conditioning connecting rods, and machining and  
matching valvetrain components are also covered. Whether you're an  
enthusiast engine builder or prospective machining student who wants  
to pursue a career as an automotive machinist, this book will provide  
insight and in-depth instruction for performing the most common and  
important machining procedures.
