I'm serious: even at the Small setting you've got 4 very sharp megapixels, which is more than enough to print any size if your photo is in focus in the first place. At Small, the D7000 still has far more resolution than Nikon's first D1 and D1H professional cameras whose images were often printed on two-page spreads in news magazines.

The D7000 will only give you an indicator in the view finder if the resulting exposure is brighter or darker than the one measured by the camera. Note: The auto ISO sensitivity control is not deactivated automatically when choosing mode M as it would be appropriate for the purpose of full manual control.
