The plugs are located within the cylinder heads in the engine and they are controlled by the engine control unit (ECU) via spark plug leads, also known as HT leads and ignition leads. It's really important that they are working properly because if they are faulty, you are going to encounter all kinds of mechanical problems.

The starting process of an engine heavily influences the exhaust gas values of a vehicle. Together, glow plugs and their connected components (glow plug control modules, glow plug relays and glow plug combustion sensors) play an important role in reducing emissions helping to protect the environment.

A spark plug is an electrical device that fits into the cylinder head of some internal combustion engines and ignites compressed petrol by means of an electric spark. Spark plugs have an insulated centre electrode which is connected by a heavily insulated wire to an ignition coil circuit on the outside, forming, with a grounded terminal on the base of the plug, a spark gap inside the cylinder.

An ignition system generates a spark or heats an electrode to a high temperature to ignite a fuel-air mixture in spark ignition internal combustion engines, oil-fired and gas-fired boilers, rocket engines, etc. The widest application for spark ignition internal combustion engines is in petrol road vehicles such as cars and motorcycles. Compression ignition Diesel engines ignite the fuel-air mixture by the heat of compression and do not need a spark. They usually have glowplugs that preheat the c

A spark plug is needed to ignite the fuel inside an RC cars petrol engine. Unlike a nitro engine that uses a glow plug and a glow starter, a petrol engine only needs the spark plug that does both jobs. Using a performance spark plug is an easy, low cost way to improve performance of your petrol RC car. Sort By Best Sellers
