Linia mobilă de asamblare și tehnicile de producție de masă pe care le-a inventat au stabilit standardele prin care avea să fie evaluată activitatea industrială în toată prima jumătate a secolului XX.

Decisions equal success--nothing happens until one is made. Businesses make millions of decisions every day. But once in a great while a leader makes a truly game-changing decision that shifts not only the strategy of a single company but how everyone does business. These big decisions are counter intuitive--they go against the conventional wisdom. In hindsight, taking a different direction may seem easy, but these bet-the-company moves involve drama, doubt and high tension. What made Apple's board bring back Steve Jobs to the company? How did J&J decide to recall every bottle of Tylenol after a poisoning scare that only involved a small batch of the drug? What made Henry Ford decide to double the wages of his auto workers and how did that change the American economy for the next century? Here management consultant Verne Harnish, the CEO of Gazelles, along with Fortune's editors,

provide the background story behind the 20 great business decisions of all time. You'll get a glimpse into the thought process leading up to these groundbreaking moments and will learn how these decisions have shaped the thinking of today's top leaders. The Greatest Business Decisions of All Time will spur debates and ignite conversations from board rooms to coffee shops and all will be wondering how one might apply these lessons to one's own business.

As part of its scientific activities, the German Research Council on Smoking and Health regularly provides opportunities for scientists to discuss progress in the field of nicotine research. In this context, the Research Council sponsored a Satellite Symposium in Hamburg, June 28-30, 1990 entitled "Effects of Nicotine on Biological Systems". This meeting was held in conjunction with the XIth International Congress of Pharmacology in Amsterdam and follows the first Satellite Symposium on Nicotine which was convened in Brisbane, Australia in 1987. The aim of these conferences has been to discuss state of the art research on the pharmacology and toxicology of nicotine and its metabolites and to integrate this information to help define nicotinic actions on the central and

peripheral nervous system as well as to evaluate health or behavioral effects associated with use of this alkaloid. Furthermore, at this conference, potential therapeutic benefits of nicotine for certain disease states were discussed. Smoking and the health effects of smoking were dealt with only as far as they could not be separated from the effects of nicotine. This volume contains the lectures presented at the symposium and illustrates that knowledge of nicotine has advanced considerably in recent years with regard to mechanisms of its actions. Despite such progress however, it is apparent that a large number of questions remain unanswered, especially in the light of new insight into cellular and molecular mechanisms which can be affected by nicotine.
