The Composite UI Application
Block is a reusable, source code-
based component based on the
Microsoft .NET Framework 2.0. It
provides proven practices to build
complex smart client user
interfaces based on well known
design patterns such as the
Composite Pattern in which simple
user interface parts can be
combined to create complex

Access PDF Programming Microsoft Composite UI

solutions, but at the same time allowing these parts to be independently developed, tested, and deployed.

Reference

~~Composite UI Application Block in C# - microsoft.com~~

In contrast, a composite UI is precisely generated and composed by the microservices themselves. Some of the microservices drive the visual shape of specific areas of the UI. The key difference is that you have client UI components (TypeScript classes, for example) based on templates, and the data-shaping-UI ViewModel for those templates comes from each microservice.

ASP.NET is an open-source, server-side web-application framework designed for web development to produce dynamic web pages. It was developed by Microsoft to allow programmers to build dynamic web sites, applications and services.. It was first released in January 2002 with version 1.0 of the .NET Framework and is the successor to Microsoft's Active Server Pages (ASP) technology.
