This book provides simple, direct, and proven solutions to problems faced by managers of competitive intelligence units.

Explores ways in which new channels of communication and new uses of information and intelligence will change corporations, and how these changes can be anticipated now in an organization's strategic planning and various corporate strategies.

First multi-year cumulation covers six years: 1965-70.

Organizations implement an indicators system to manage several types of resources and reduce dysfunctions through better decision-making. However, many have lost sight of how to manage indicators and information systems in a way that strengthens the capacity to react at strategic and operational levels. From the planning perspective, managers agree what needs to be done in the short, medium and long term and these are expressed in a plan encompassing the organization's aspirations over various time horizons. A measurement plan is often missing, however, especially in the form of a document that specifies each indicator and governs each user's behavior when using performance indicators, as well as the metrics that allow us to learn whether the measurement project is having the desired impact on the organizational environment over time. "Managing Your Indicators System: A Key for Managers and Planners" intends to fill a void in how to manage your organization's indicators system, thus having a positive effect on the performance of managers and planners.
