to facilitate the expansion of training capabilities and at the same time to provide the most modern techniques in training methods, radar simulators were installed in Maritime Administration's three region schools. It soon became apparent that to properly instruct the trainees, even with the advanced equipment, a standardize up-to-date instruction manual was needed. The first manual was later revised to serve both as a classroom textbook and as an onboard reference handbook. This newly updated manual, the fourth revision, in keeping with Maritime Administration policy, has

This is a guide as to why aliens are real and how they have been with us for thousands of years. It explores what their objectives may be and the endless possibilities of what's in the universe.

New and experienced teachers working with children with special needs in mainstream or special school settings are increasingly discovering the value of research to inform and improve their teaching. This highly accessible text features:

- identification of the key research issues which relate to different aspects of SEN

investigations with different purposes in mind. This text will be relevant to teachers and SENCOs, and to mentors and tutors in their supporting role.

In this special one-shot illustrated by series back-up artist Marc Ellerby, Rick and Morty find themselves stranded on an alien ship. But could the ship be HAUNTED? Yeah, I mean, it probably is.

It can be stated with some justification that polymers, because of their mainly synthetic origins, are important because of their applications, perhaps more

than in the case of more familiar and conventional materials such as metals and wood, which would exist apart from their use in human activities. The majority of polymers have been synthesized under the impetus of requirements for new and improved properties. The preparative routes to new polymers and blends, and the exploration of their structures and properties constitute absorbing subjects for study, but it is the final application of these materials in real, commercial products that provides the driving force for such developments. In recent years a number of

excellent books have appeared which deal with the chemistry, structure, properties and engineering aspects of polymers. The processing of polymers, as products of the chemical industry, into engineering and consumer goods has received much less attention. There are some valuable texts for individual processes, especially the extrusion and injection moulding of thermoplastics, but others are less well served. This book provided a review of all the important processing routes for transforming polymers into products.
